

INTRODUCING THE

Darktrace ActiveAI Security Platform

Powered by AI that learns your unique business in real time to provide visibility into security gaps, detect novel threats early, and provide an autonomous response that shuts down active threats without disrupting operations.

DETECT + RESPOND

Comprehensive Protection Across Your Enterprise

NETWORK

Proactive, Intelligent, Dynamic Cybersecurity

ActiveAI Security that learns your unique network to proactively defend against ransomware and never-before-seen threats.

CLOUD

Secure Your Multi-Cloud Environment in Real Time

Unprecedented visibility into cloud network, architectural, and management layers, combined with platform-native response and real-time attack path modeling.

Ask about our **extensive partnerships:**

OT

The Only Unified IT-OT Solution

Combine asset identification and real-time threat detection and (optional, customizable) response with the industry's most comprehensive OT risk management solution.

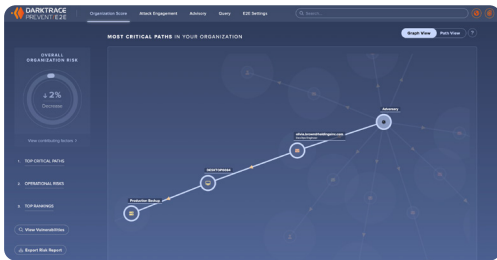

See our **Darktrace/OT Solution Brief** for more information

EMAIL

The Most Complete AI-Driven Cloud Email Security

Protect against zero-day and multi-vector attacks with email security that isn't limited to static rules and historical attack data. The industry's most advanced solution to stop phishing, account takeover, and data loss.

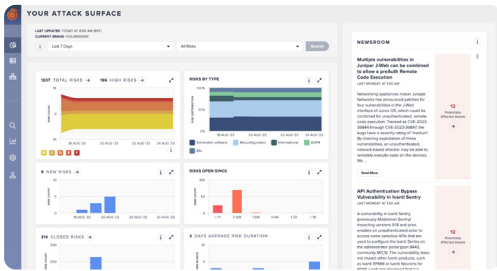

See our **Darktrace/Email Solution Brief** for more information

DARKTRACE PREVENT

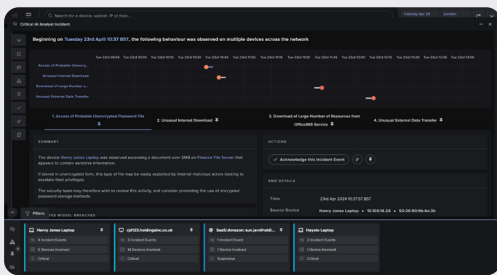

Prioritize + Reduce Risk with End-To-End Attack Path Modeling

Shift from a reactive to proactive security stance, getting ahead of the attacker and stopping attacks before they happen. Prioritize threats and vulnerabilities, optimize and harden defenses, and reduce the overall cyber risk to your organization.

Combine an Internal and External View of Risk

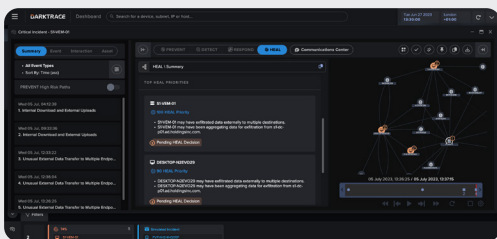

Continuous monitoring of your attack surface for risks, high-impact vulnerabilities and external threats gives you unparalleled discovery and actionable insights. These insights proactively combine with detection and response mechanisms for autonomous hardening of risky assets.

CYBER AI ANALYST

Streamline SOC Operations with AI Investigations

Darktrace's Cyber AI Analyst was built to optimize threat investigation by continuously examining every security threat that arises. It illuminates the highest priority threats at any one time and rapidly synthesizes all of the context around an attack into a natural language report. The result is that time-to-meaning and time-to-response are dramatically reduced – allowing your team the time to use their expertise where it really matters.

DARKTRACE HEAL

Ensure Readiness to Recover Quickly in the Wake of an Attack

Establish cyber readiness with incident simulations in your own environment. Get back up and running quickly with dynamic playbooks and secure crisis collaboration channels. And in the aftermath of an incident, receive a timed report detailing what happened and what actions were taken.

Darktrace Services

MANAGED DETECT + RESPOND (MDR):

Maximize your defenses with wrap-around expert support

Our global, 24/7 SOC triages and investigates incidents on your behalf, and can escalate response actions on the highest-priority alerts in your Darktrace environment, buying your team precious time to coordinate a remediation plan while the threat is contained.

ASK THE EXPERT:

Darktrace Cyber Analysts deliver rapid feedback and expert remediation advice, with easy to use chat functionality and 24/7 assistance.

PROACTIVE THREAT NOTIFICATION:

With this around-the-clock, comprehensive threat notification service, customers are contacted immediately in the event of attack.
