

SOLUTION BRIEF

ArmorPoint OpenXDR.

Visibility Through Interoperability.

ArmorPoint OpenXDR consolidates disparate security tools into a unified, powerful defense mechanism to transcend traditional security measures. Integrate your existing EDR capabilities into a centralized command center for unparalleled insight and control.

FEATURES:

OPENXDR

- ArmorPoint SOC Platform
- Network device monitoring + collection
- Endpoint threat detection agents
- Integrate your EDR + Manual 24/7 Alert Mgmt.
- Data collection + retention
- Cloud + SaaS detection analytics
- Managed SIEM dashboard + log analytics
- Unlimited incident investigation + escalation
- Unlimited guided incident management

24x7 Human Monitoring + Expert Security Analysis

Extend your internal security operations team with continuous, expert-level monitoring, ensuring a vigilant and intelligent defense mechanism around the clock.

Unified Security Alert Dashboard

Streamline threat management with an integrated dashboard that consolidates alerts from your network, operating system, endpoint, and cloud security, ensuring comprehensive oversight and a cohesive security posture.

Rapid Detection + Response

Elevates your threat detection and incident response abilities ensuring rapid identification, detailed analysis, and guidance for efficient resolution of security incidents, minimizing their impact on your organization's operations.

Seamless Integration with Existing Tools

Seamlessly integrate with your current EDR tool, elevating its capabilities. Experience the clarity and control essential for navigating today's dynamic security landscape, ensuring your security systems operate cohesively for optimal efficiency and effectiveness.

INTEGRATE YOUR EXISTING EDR

KEY FEATURES

Cloud-Based SIEM

ArmorPoint's cloud-based SIEM leverages sophisticated analytics to process security alerts in real-time, ensuring rapid detection and response to threats. Integrating data from diverse sources such as network devices, endpoints, cloud, and application logs, it provides a comprehensive and dynamic approach to your cybersecurity defense.

Cloud Detection

Illuminate threats within your IaaS/SaaS environments with ArmorPoint's Cloud Detection. Our 24x7 monitoring and detection capabilities ensure around-the-clock protection, provide deeper operational insights, and facilitate immediate resolution, ensuring your cloud infrastructure remains secure and resilient.

Endpoint Threat Analysis

ArmorPoint's Endpoint Threat Analytics (ETA) unveils hidden threats, assesses vulnerability impact, and fortifies your defense strategies. Leveraging insights from ETA, you'll gain an in-depth breakdown of your system's daily operations and behaviors, ensuring comprehensive awareness and rapid detection of unusual activities.

CMDB

ArmorPoint OpenXDR's CMDB enables comprehensive management of your IT asset inventory, providing deep visibility into your infrastructure, supporting risk management, and guiding adherence to compliance standards by keeping you fully informed about every component of your IT ecosystem.

File Integrity Monitoring

ArmorPoint's File Integrity Monitoring system vigilantly tracks and alerts you to unauthorized changes, facilitating early detection of potential security breaches and helping you comply with regulatory frameworks.

Network Threat Detection

Network Threat Detection (NTD) is a modern security solution designed to evaluate data patterns and identify anomalies. ArmorPoint OpenXDR's NTD capabilities empower you to achieve crystal-clear network visibility, pinpoint anomalies with precision, and safeguard every data transaction.

Unify Your Defenses and Build Resilience.

Don't let a disparate tech stack keep you from future-proofing your business. Integrate your EDR with ArmorPoint OpenXDR and get the insights and support you need to build and maintain cyber resilience, all within one unified ecosystem.

Ready to bring all of your tools together for unparalleled visibility? [Book a meeting](#) with an ArmorPoint Solution Expert to learn more about ArmorPoint OpenXDR today.
