

SOLUTION BRIEF

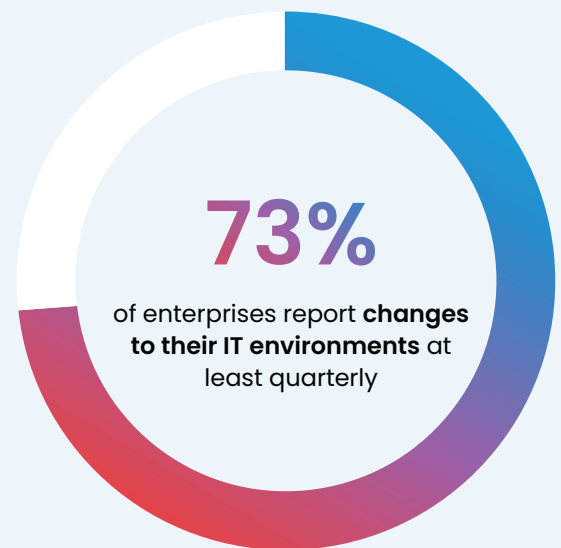

Automated Penetration Tests.

Continuously Test Your External Network Defenses.

ArmorPoint's Automated Penetration Testing services are designed to rigorously assess the strength of your external network defenses by focusing on the perimeter of your network, ensuring your organization remains secure against the most persistent and sophisticated cyber-attacks targeting your internet-facing systems.

CORE OUTCOMES

- Uncover weaknesses in your network defenses before attackers do
- Receive actionable insights on how to address and prioritize vulnerabilities
- Ensure compliance with industry regulations through continuous and automated testing
- Improve your overall security posture by regularly updating your defense mechanisms against the latest threats

How it Works.

STEP 1	SCOPING & PREPARATION	→ Tailor the penetration test to your specific network environment to ensure comprehensive coverage
STEP 2	RECONNAISSANCE	→ Gather data on target environments and identify how they are connected to the internet
STEP 3	MAPPING	→ Outline the structure and exposed surfaces of your network to pinpoint potential entry points
STEP 4	VULNERABILITY ASSESSMENT	→ Detect and classify network vulnerabilities based on their severity and exploitability
STEP 5	EXPLOITATION	→ Simulate attacks to understand the real-world effectiveness of potential exploits.
STEP 6	REPORTING	→ Receive detailed reports and recommendations for strengthening your network security posture.

Unlock Advanced Network Protection.

Don't wait for a breach to reveal the cracks in your defenses. Proactively secure your network's perimeter with ArmorPoint's Automated Penetration Testing.

Book a call with a Solution Expert today and take the first step towards enhanced network security.
