Proactive Incident Response

The brightest minds in offensive and defensive security, watching your data for threats
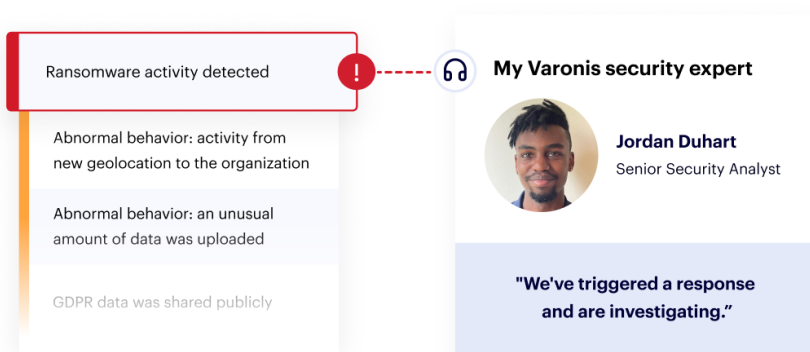

Challenge

Security teams are stretched thin. They're responsible for sifting through mountains of alerts — many of which are false positives — to find attacks before they take hold. Many times, this means managing multiple systems and spending hours on investigations to separate the signal from the noise.

Solution

Varonis' Proactive Incident Response team watches your Varonis alerts for you and notifies you of true incidents. We investigate suspicious behavior and call you if we see a problem. This means that instead of more alerts, you get outcomes — without even needing to log in.
In the background, we develop custom threat models specific to your environment and configure automated responses to stop threats like ransomware in its tracks.

Key benefits

Proactive alert monitoring and threat investigation

Threat model development tailored to your organization

Automatic response configuration to stop an attack in its tracks

Regular check-ins to review security findings

Ransomware activity detected

Abnormal behavior: activity from new geolocation to the organization

Abnormal behavior: an unusual amount of data was uploaded

GDPR data was shared publicly

My Varonis security expert

Jordan Duhart
Senior Security Analyst

"We've triggered a response and are investigating."

"The investment we've made in Varonis has been immeasurable in finding and stopping cyberattacks. The Varonis team proactively reaches out to me with true incidents, rather than just surfacing more alerts for my team to manage."

Scott Mercer
Director, Cybersecurity and Technical Services, KU Endowment

What you can expect

Proactive monitoring and investigation

Our team of cybersecurity experts watches your data for threats, investigates alerts, and only surfaces true incidents that require your attention. Varonis saves your team time and hardens your security defenses — all without you even needing to log in.

A resilient security infrastructure

Our dedicated engineers will do all the heavy lifting for you, including creating custom threat models designed for your specific environment, data, and organization and configuring automated alert responses. Use our team's industry and product expertise to enhance proactive threat detection efforts.

Consistent, expert help

We meet regularly with our customers to ensure Varonis delivers maximum value to each organization. Our engineers will sit down with your team to review security findings and explain each result, providing you with personalized recommendations for where you can improve your security posture.
