

Patch Management

Remediate vulnerabilities quicker with our advanced, integral patch management tools.

vRx patch management fully supports Windows, macOS, and Linux. Patch vulnerabilities and deploy OS and software updates automatically and remotely. vRx is an all-in-one, lightweight agent that covers all of your vulnerability management needs. With flexible and easy-to-use tools that are managed from an intuitive interface, your IT and security teams will be able to get more updates deployed faster.

Simplify Patch Tuesday

Automate

It can be difficult to patch vulnerable apps across thousands of endpoints. vRx's patch management allows you to update specific endpoints or applications at any scale according to specific triggers.

Patch Cycle Scheduling

Patch deployment can strain service and cause interruptions. With vRx, you can schedule patch deployments during off hours and planned downtime.

OS & Third-Party Apps Update

Deploy scalable updates to Windows, macOS, and Linux operating systems across your organization. Ensure that your systems stay patched as applications are updated or installed with vRx's comprehensive patch management.

Endpoint Management

vRx keeps a real-time tally of all endpoints and their applications across your organization's digital infrastructure and reports which assets and applications pose the highest risk to your organization.

Server Patch Management

Avoid costly downtime and heavy traffic by keeping your servers and virtual machines up to date with vRx's lightweight patch management system.

High Performance

Patch management is only useful if it doesn't interrupt your organization's day to day. vRx is an efficient and lightweight agent that delivers powerful performance without bogging down your IT infrastructure.

CVE Reports

Understand the threats your specific infrastructure faces with useful and detailed reports from vRx. Is a recently disclosed CVE a high priority? vRx can rate severity based on contextual information unique to your systems.

Events and Activities Log

vRx keeps track of all events and actions pertaining to patch management and vulnerability remediation. Demonstrate your team's value with rich reports and audit your patch management process.

Vendor Severity Vocabulary

Critical Severity

Has deemed the problem associated with this patch to be Critical in nature.

High Severity

Considers the problem related to this patch Important to correct.

Moderate Severity

The related vulnerability is of Moderate severity

Low Severity

While it poses a security risk, vRx deems that risk to be Low.
